Rhenari

# Know whether your strategy is happening, and whether you'll reach it.

WHY WE BUILT THIS

"I started by studying burnout in engineering teams. What I found was that late discovery of drift from the plan is what creates the conditions that exhaust good teams. Rhenari surfaces drift early enough to act."

MINA RAVER · CO-FOUNDER

## About Rhenari

Rhenari reads the work across your business systems and compares it with your plan, then tells you what's moving it forward, what's holding it back, and what to do, while there's still time to correct.

So you ship what you plan, every time.

## What we offer

Rhenari is execution intelligence for the executives who own strategic change. It connects to the tools your teams already use (Microsoft Teams, Microsoft 365, Jira, Azure DevOps, and more), reads in memory, and keeps only scores and insights. Content is never stored.

It delivers two scores daily in Microsoft Teams. Momentum is acceleration minus friction across your organization, positive when the work is moving toward your goals. Confidence shows how much evidence sits behind the reading. Each score comes with plain-language insights on what's moving the plan forward or holding it back, and alerts that flag drift from the plan with its cause and the evidence behind it.

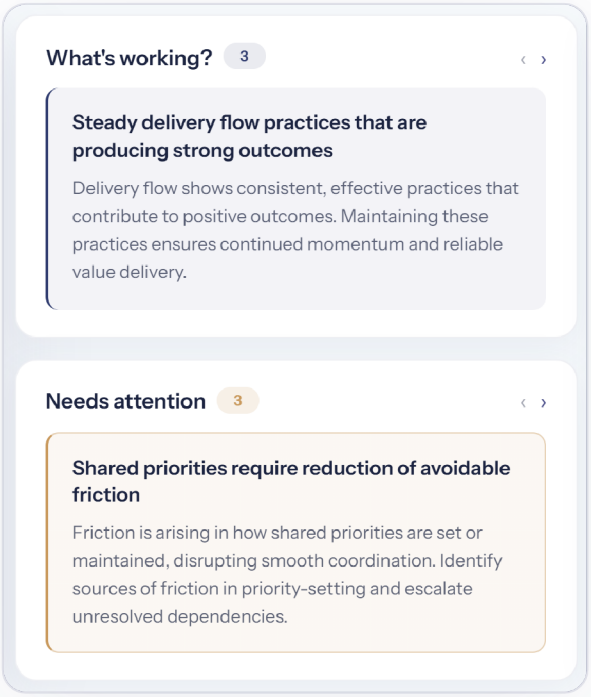

Fully hosted SaaS. Nothing deploys in your environment. Setup takes minutes.

## Key use cases

### Daily execution intelligence

Momentum and Confidence scores delivered daily, with plain-language insights on what's driving them.

### Early drift detection

Proactive alerts surface drift from the plan, anomalies, and capacity risk before they compound into boardroom surprises.

### Cross-tool alignment

Reads across the 12 tools Rhenari connects to, surfacing insights no single tool can expose alone.

### Zero deployment setup

Fully hosted SaaS. Tenant admin completes guided onboarding inside the Teams app in minutes. A first confident score arrives in five days.

## Why Rhenari?

### Continuous, not periodic

Most execution reviews happen in cycles: quarterly reviews, weekly standups, monthly board prep. Rhenari reads the work every day. Drift that would take weeks to surface in a status meeting is flagged the day patterns shift.

### Interpreted, not just measured

Dashboards show what happened. Rhenari interprets what it means. Every score includes a plain-language explanation of what is driving acceleration or friction — not metrics to decode, but direction to act on.

### Complete, not filtered

Status updates pass through people, and each handoff compresses the signal. Rhenari reads execution data directly from connected tools and connects the dots at the source, before any human filter touches it.

### Protective, not extractive

Rhenari reads in memory and keeps only scores and insights; message bodies and email text are never stored. Team-level insights only. Individual data is never surfaced. AES-256 at rest, TLS 1.2+ in transit, tenant isolation at every layer.

### Built for Teams

Scores, insights, and alerts arrive in the Teams channels your team already uses. Procured through Microsoft Commercial Marketplace. Built on Microsoft Azure. No new app to learn.

Rhenari

**Rhenari + Microsoft** Rhenari is built on Microsoft Azure, delivered inside Microsoft Teams, and procured through the Microsoft Commercial Marketplace. It extends your existing Microsoft investment by turning the collaboration and delivery signals already flowing through your Microsoft environment into continuous execution intelligence — no new infrastructure, no new app to learn.
